## 1 PUSH 开放平台富媒体接口概述

#### 1.1 系统概述

目的:为了丰富华为Push富媒体呈现能力,使业务做一些简单的富媒体Html/JavaScript开发即可使用Android基础能力,如GPS、加速计、应用拉起、播放音、视频。

#### 1.2 典型应用交互流程

- 开发者根据华为 Push 提供的 JavaScript lib 进行简单的开发和测试
- 在联盟上新建富媒体推送,并复制对应 Html 与 javaScript 内容
- 推送到手机,并查看效果

#### 1.3 注意事项

开发者本地开发调试的过程中,可以使用 $\underline{\text{http://open.hicloud.com/android/push\_destop1.0.js进行测试接}}$ 口是否OK。实际发送富媒体的时候,建议去除引用该文件,节省客户端流量,该文件只适用于 $\underline{\text{Pc}}$ 开发使用。

# 2 富媒体 JavaScript 开发接口

#### 2.1 播放音频 JavaScript 接口

#### prepare(successCallback, errorCallback, statusCallback, options)

**说明:** 准备音频文件接口,该函数主要是进行音频文件校验,目前仅支持http/https、下载到本地音频(相对路径)。

参数		描述	是否必选
successCallback		音频文件校验成功回调, 可在	沿
		回调里面执行Play()	
errorCallbac	k	音频准备、播放过程失败等回	否
		调	
statusCallba	ck	获取当前播放位置/音频时长回	沿
		调	
options	url	音频地址。网络路径或者相对路	是
		径 (下载打开的富媒体类型)	
	pauseOnActivi	在当前Activity onPause时,是	否
	tyPause	否暂停播放。默认true	

#### 2. play()

说明:播放音频

3. pause()

说明: 暂停播放

4. stop()

说明: 停止播放

5. seekto(milliseconds)

说明: 跳转到 milliseconds 时刻播放

getPlayingStatus(frequently)

说明: 定时返回当前的播放状态,包括播放位置/音频时长。回调statusCallback

#### 接口示例

```
<html>
                 <head>
                                       <title>AUDIO Example</title>
                                        <!--Pc broswer 测试javascript用,实际推送时可去除 -->
                                        <script type="text/javascript" charset="utf-8" src="http://open.hicloud.com/android/push_destop1.0.js"></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></scr
                                        <script type="text/javascript" charset="utf-8">
                                                            function onDeviceReady(){
                                                                                   console.log("when device ready,will print this log");
                                                            var url = null;

           </div>
     </body>
</html>
```

## 2.2 播放视频 JavaScript 接口

#### play(successCallback, errorCallback, options)

说明:播放视频接口.

参数	描述	是否必选
successCallback	成功发出视频播放请求回调	否
errorCallback	发出视频播放请求之前失败回	否

		调	
options	url	视频播放地址,仅支持网络视频地址	是
	mime-type	视频类型,默认是"video/*"	否
	package-name	指定由哪个视频播放器播放	否

#### 接口示例

```
<html>
                    <head>
                                        <title>VIDEO Example</title>
                                          <!--Pc broswer 测试javascript用,实际推送时可去除 -->
                                        <script type="text/javascript" charset="utf-8" src="http://open.hicloud.com/android/push_destop1.0.js"></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></scr
                                        <script type="text/javascript" charset="utf-8">
                                                           function onDeviceReady(){
                                                                                console.log("when device ready,will print this log");
                                                          }
                                                           //播放视频
                                                           function play_video_1() {
                                                                                var options = {
                                                                                                     "url":"http://xxxxx/xxxx.3gp",
                                                                               }
                                                                                video.play(onSuccess,onError,options);
                                                           //使用指定视频播放应用打开,示例: 使用pps应用
                                                           function play_video_2() {
                                                                                var options = {
                                                                                                     "url":"http://xxxxx/xxxxxx.mp4",
                                                                                                     "mime-type":"video/mp4",
                                                                                                     "package-name":"tv.pps.mobile"
                                                                                }
                                                                                video.play(onSuccess,onError,options);
                                                          }
                                                           function onSuccess(json){
                                                                                console.log(JSON.stringify(json));
                                                           function onError(json){
```

console.log(JSON.stringify(json));

}

## 2.3 加速度(摇一摇)JavaScript 接口

### start (successCallback, errorCallback, options)

说明: 开启加速度服务

参数		描述	是否必选
successCallbac	ck	成功获取到加速度回调	否
errorCallback		获取加速度失败	否
	minAccuracy	最小精度	1. Low
options			2、Medium
触发条件			3、High
	minAccelX	最小水平横向加速度	默认 10
	minAccelY	最小水平竖向加速度	默认 10
	minAccelZ	最小垂直加速度	默认 10

#### 2. stop ()

说明:停止加速度服务

#### 3. playSound (options)

说明:播放短促音频

参数	描述	是否必选

			1、TYPE_SHAKE
options	soundType	音频类型	目前仅支持1种
额外参数			

#### 接口示例

```
<html>
                 <head>
                                   <title>ACCEL Example</title>
                                   <meta http-equiv="Content-Type" content="text/html; charset=utf-8" />
                                     <!--Pc broswer 测试javascript用,实际推送时可去除 -->
                                   <script type="text/javascript" charset="utf-8" src="http://open.hicloud.com/android/push_destop1.0.js"></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></script></s
                                   <script type="text/javascript" charset="utf-8">
                                                    function onDeviceReady(){

#### 2.4 地理位置接口

getLocation (successCallback, errorCallback, options)

说明: 获取地理位置信息

ĺ	参数	描述	是否必选

successCallback errorCallback		成功获取到地理位置	否
		获取地址位置失败	否
options 触发条件	useGps	是否使用 GPS (建议定位时使用 GPS, 网络定位依赖 google 框架 服务,部分 ROM 可能不存在该服务)	否,默认 false
	keepLoc	是否监听多个位置	默认 true
	minTime	最小时间变化时返回位置信息	默认 0 , 实时获取
	minDistance	最小距离变化时返回位置信息	默认 0 , 实时获取

#### 2. clearWatch ()

说明: 取消位置监听

#### 接口示例

```
<html>
                         <head>

#### 2.5 打开应用接口

# open (successCallback, errorCallback, statusCallback, options) 说明: 打开指定应用

参数		描述	是否必选
successCa	llback	应用打开成功	否
errorCall	oack	应用打开失败	否
statusCal:	lback	应用关闭后,返回	否
		OnActivityResult	
	package-name	应用包名	是
options			
条件	intent-uri	打开Activity的Intent	否
		URI字符串	
	requestCode	匹配过滤OnActivityResult	否
	resultCode	匹配过滤OnActivityResult	否
	appmarket	应用不存在时是否打开应用市	否(默认不打开
		场	)
		~	

#### 接口示例

```
function onDeviceReady(){
